

TRADITIONAL PATIENT CARE FLEECE PRODUCTS

For centuries, caregivers used real sheepskin to comfort and protect loved ones from the formation of pressure sores. As time went by, real sheepskin became more scarce and costly. The advent of technology and the development of synthetic fibers have allowed Alpha Pro Tech to develop a complete line of traditional decubitus prevention products that function as well as the time-tested sheepskin but with greater benefits in terms of quality, durability and economy. By employing today's new manufacturing technologies, Alpha Pro Tech offers you not only one of the most popular synthetic lambskin Bed Pads, but also a complete line of Patient Care Products such as heel and elbow protectors and a wide variety of wheelchair accessories.

Unreal Lambskin®

Unreal Lambskin is our trademark for the premium fabric used in the construction of our top-of-the-line products. Look for this logo when you want premium quality and durability. Traditional Unreal Lambskin products provide you and your patient the following features and benefits...
